Dear Sirs:

The Rodeo Sanitary District was introduced to Slipcoat IRC™ in mid 2016 as an environmentally friendly non-permanent spray on coating that would reduce equipment cleaning times and we have been utilizing it ever since. We are using Slipcoat IRC™ in multiple locations around our facility, including; centrifuge bowls, skimmers, scum troughs, grit collection, etc.

Slipcoat IRC™ has drastically reduced cleaning times for the centrifuge bowls and has made cleaning simple in areas where struvite has historically caused time consuming cleaning. Slipcoat IRC™ is easily sprayed into the nooks and crannies of the bowls and creates a protective coating that allows struvite to be easily washed away.

Skimmers and scum troughs are also coated with Slipcoat IRC™, which results in minimal build up of grease and other materials. What small amount of material that does accumulate is easily washed off with a low pressure hose.

Grit collection areas are also coated with Slipcoat IRC™, ensuring easy disposal and cleaning.

We have found that the use of Slipcoat IRC™ has drastically reduced our facilities cleaning times and requirements. Facilities managing their own sludge disposal may take particular interest in Slipcoat IRC.

Sincerely,
Rodeo Sanitary District

Tim Gregor
Operator
